#### **Disclaimer**

To the maximum extent permitted by applicable law, the products described (including its hardware, software and firmware, etc.) in this document are provided **AS IS**, which may have flaws, errors or faults. Yuejiang makes no warranties of any kind, express or implied, including but not limited to, merchantability, satisfaction of quality, fitness for a particular purpose and non-infringement of third party rights. In no event will Yuejiang be liable for any special, incidental, consequential or indirect damages resulting from the use of our products and documents.

Before using our product, please thoroughly read and understand the contents of this document and related technical documents that are published online, to ensure that the robotic arm is used on the premise of fully understanding the robotic arm and related knowledge. Please use this document with technical guidance from professionals. Even if follow this document or any other related commands, Damages or losses will be happen in the using process, Dobot shall not be considered as a guarantee regarding to all security information contained in this document.

The user has the responsibility to make sure following the relevant practical laws and regulations of the country, in order that there is no significant danger in the use of the robotic arm.

## Shenzhen Yuejiang Technology Co., Ltd

Address: 3F, Building NO.3, Tongfuyu Industrial Town, Nanshan District, Shenzhen, China

Website: www.dobot.cc

## **Preface**

## **Purpose**

The document is avaliale for communication protocol of commands or data interaction between Dobot Magician upper computer and Dobot Magician robot arm.

## **Intended Audience**

This document is intended for:

- Customer Engineer
- Sales Engineer
- Installation and Commissioning Engineer
- Technical Support Engineer

## **Change History**

Date	Change Description
2019/05/05	Delete communication protocol GetQueuedCmdLeftspace
2018/07/12	Add description of Set/Get IRSwitch
2017/05/05	Modify the mistake of SetHOMECmd, Add description of interface command about rail, Add description of Get DeviceID, Add description of color sensor ports command
2016/12/20	Get the remaining space of command queue
2016/11/30	Add description of movement control (JOG PTP CP ARC)
2016/11/21	Add BLE Reading & Writing Characteristic UUID
2016/11/18	Add description of communication parameters
2016/09/22	Create a document

## **Symbol Conventions**

The symbols that may be founded in this document are defined as follows.

Symbol	Description
DANGER	Indicates a hazard with a high level of risk which, if not avoided, could result in death or serious injury
<b>≜</b> WARNING	Indicates a hazard with a medium level or low level of risk which, if not avoided, could result in minor or moderate injury, robotic arm damage
⚠NOTICE	Indicates a potentially hazardous situation which, if not avoided, can result in robotic arm damage, data loss, or unanticipated result

Symbol	Description
QNOTE	Provides additional information to emphasize or supplement important points in the main text

## 1. Communication Protocol

### 1.1 Communication Parameters

Table 1 Communication parameters description

Communication Parameters	Details	Description
	Baud rate	115200bps
LICD to sovial newt	Data bits	8 Bit
USB to serial port	Stop bit	1 Bit
	Parity bit	Void
Wi-Fi	IP	Route and other distribution
VVI-F1	COM port	8899
	Service UUID	0003CDD0-0000-1000-8000-00805F9B0131
BLE	Read (Command) Port Characteristic UUID	0003CDD1-0000-1000-8000-00805F9B0131
BLE	Write (Command) Port Characteristic UUID	0003CDD2-0000-1000-8000-00805F9B0131
	Baud rate	115200bps
TVVV	Data bits	8 Bit
TTL	Stop bit	1 Bit
	Parity bit	Void

## 1.2 Protocol Introduction

Dobot Magician can be controlled by PC/Android/iOS, achieving data transmission through certain communication protocols. The communication can be realized by USB-serial port, TLL level serial port, Wi-Fi (UDP).

Physical layer receives 8 bite raw data each time, which need to determine the starting, end of the data and verify the accuracy of the data by communication protocols. The communication protocol includes packet header, packet load and checksum to ensure the accurate transmission.

#### 1.2.1 Protocol Features

Dobot Magician communication protocol features are as follows:

- Protocol command does not have fixed length.
- Protocol command consists of packet header, payload frame, and check.
- All communications are sent by the host initialtively, and for all communications commands, the client will return data (both read and write). For queue commands, the client returns data with 64-bit index.
- All commands are divided into immediate commands and queue commands. All readoperations are the immediate commands, which can be executed immediately.
- The queue commands will be placed in the queue of the client for serial execution. For write (or set) operation, motion commands should be queue commands (such as homing, JOG, PTP).

- Motion parameter commands are not only the immediate commands but also the queue commands.
- Before sending queue commands to client, the host should inquire the remaining space of command queue of client (check once and send multiple commands).
- The immediate command is always executed immediately. While the execution status of a queue command can be obtained by querying the index of the queue command being executed in the client and comparing with the index of this queue command (mentioned in point 3).
- The parameters in the commands use little endian mode.

#### **1.2.2** Checksum Calculation

In Dobot Magician communication protocol, the checksum at the ending side is calculated as follows.

- **Step 1** Add all the contents of the Payload byte by byte (8 bits) to get a result R (8 bits);
- **Step 2** Get the 2's complement of the result **R** (8 bits), and put it into check byte.

### **MNOTE**

2's complement. For an N-bit number, the 2's complement is equal to  $2 ^ N$  minus the number. In this protocol, assuming the result R is 0x0A, and the 2's complement, i.e., the result of the above checking is equal to  $(2 ^ 8 - 0x0A) = (256 - 10) = 246 = 0xF6$ .

At the receiving end, the method of verifying whether a frame of data is correct as follows:

- **Step 1** Add all the contents of the Payload byte by byte (8 bits) to get a result A;
- **Step 2** Add result **A** and the check byte. If the result is 0, the checksum is correct.

#### 1.2.3 Protocol Classification

Protocols can be divided into the following parts according to their different implementation functions:

- Queue execution control command
- Related command of device information
- Common parameter command
- Home function command
- Handhold teaching command
- Jog mode command
- PTP mode command
- CP mode command
- TRACK mode command
- WAIT mode command
- TRIG trigger related command
- IO control command and so on

By classification, communication protocol function IDs are divided into the following items are shown in Table 2:

Table 2 Classification of functional items

Classification of functional items	Function ID area	Avaliable ID number
ProtocolFunctionDeviceInfoBase	[0, 10)	10
ProtocolFunctionPoseBase	[ 10, 20 )	10
ProtocolFunctionALARMBase	[ 20, 30 )	10
ProtocolFunctionHOMEBase	[ 30, 40 )	10
ProtocolFunctionHHTBase	[ 40, 50 )	10
ProtocolFunctionArmOrientationBase	[ 50, 60 )	10
ProtocolFunctionEndEffectorBase	[ 60, 70 )	10
ProtocolFunctionJOGBase	[ 70, 80 )	10
ProtocolFunctionPTPBase	[ 80, 90 )	10
ProtocolFunctionCPBase	[ 90, 100 )	10
ProtocolFunctionARCBase	[ 100, 110 )	10
ProtocolFunctionWAITBase	[ 110, 120 )	10
ProtocolFunctionTRIGBase	[ 120, 130 )	10
ProtocolFunctionEIOBase	[ 130, 140 )	10
ProtocolFunctionCALBase	[ 140, 150 )	10
ProtocolFunctionWIFIBase	[ 150, 160)	10
ProtocolFunctionQueuedCmdBase	[ 240, 250 )	10
ProtocolMax	256	1

#### **■NOTE**

- An ID description is provided in each of the command description in the following contents;
- In the following Ctrl byte, the bit 0 of Ctrl is rw, the bit 1 of Ctrl is Queued

#### **MNOTE**

When **isQueue** = 1,that indicats the instruction is a queue command, which returns a 64-bit index. So the length is 2+8. When **isQueue** = 0, the instruction is an immediate command, which has no return. So the length is 2+0.

## **1.3** Device Information

These commands are used to set device SN number, device name, device version number, and read the current device information.

#### 1.3.1 Set/Get Device SN

This command is to set device serial number, the issued command package is shown in Table 3 and the returned command package is shown in Table 4.

Table 3 The command package of Device SN

Header	Len		Payload											
		Len	Len	Len	Len	Len	Len	Len	Len	ID.	Ctrl		Davassa	Checksum
		ID	rw	isQueued	Params									
0xAA 0xAA	2+n	0	1	0	char[n] DeviceSN	Payload checksum

0 v A A 0 v A A	2+12	4	0	0 0	nint22 t[2]. DavigaID	Payload
0xAA 0xAA		4	U		uint32_t[3]: DeviceID	checksum

## 1.4 Real-time Pose

The function of setting the initial pose, obtaining the real-time pose, the kinematic parameters and so on.

#### 1.4.1 GetPose

This command is to get the real-time pose of the Dobot, the issued command packet format is shown in Table 21, and the returned command packet format is shown in Table 22.

Table 21 The command packet of GetPose

			Payload					
Header	Len			Params	Checksu			
		טו	rw	isQueued	r ai ailis	m		
0xAA 0xAA	2+0	10	0	0	Empty	Payload checksum		

Table 22 The returned command packet of GetPose

Header		Header Len ID Ctrl		Checksu			
	Header		Ctrl	Doromo			
			טו	rw	isQueued	Params	m
	0xAA 0xAA	2+22	10	0	0	Pose (See Program 1)	Payload
	UXAA UXAA	2+32	10	U	U		checksum

Program 1 Pose definition

#### 1.4.2 Reset Pose

This command is to reset the real-time pose of the Dobot, the issued command packet format is shown in Table 23, and the returned command packet format is shown in Table 24.

Table 23 The command packet of ResetPose

			Checksu					
Header	Len	15	Ctrl		Davama			
		ID rw isQue		isQueued	- Params			m
0xAA 0xAA	2+9	11	1	0	uint8_t: manual	float: rearArm Angle	float: frontArm Angle	Payload checksum

Table 24 The returned command packet of ResetPose

				Payload				
	Header	Header Len		_ Ctrl		Davassa	Checksu	
			ID -	rw	isQueued	Params	m	
	0xAA 0xAA	2+0	11	1	0	Empty	Payload checksum	

#### **■NOTE**

When **manual** is **0**, the attitude is automatically reset without **rearArmAngle** and **frontArmAngle**; when **manual** is **1**, the **rearArmAngle** and the **frontArmAngle** are required.

#### 1.4.3 Get PoseL

This command is to get the real-time pose of sliding rail, the issued command packet format is shown in Table 25, and the returned command packet format is shown in Table 26.

Table 25 The command packet of GetPoseL

Header			Payload					
	Len	ID	Ctrl		Doromo	Checksu		
		וטו	rw	isQueued	Params	m		
0xAA 0xAA 2	2+0	2+0 13	0	0	Et	Payload		
	2+0	13	0	U	Empty	checksum		

Table 26 The returned command packet of GetPoseL

0xAA 0xAA 2-	2+4	13	0	0	float: PoseL	Payload
	2+4	13	0	0	noat: PoseL	checksum

## 1.5 Alarm

#### 1.5.1 Get Alarms State

This command is to get alarm status, the issued command packet format is shown in Table 27, and the returned command packet format is shown in Table 28.

Table 27 The command packet of GetAlarmsState

			Chaakau				
Header	Len	ID	Ctrl		Doromo	Checksu	
		ID	rw	isQueued	Params	m	
Ov. A. A. Ov. A. A.	2+0	2+0 20	0 0	Ε	Payload		
0xAA 0xAA		20		U	Empty	checksum	

Table 28 The returned command packet of GetAlarmsState

			Payload				
Header	Len	en ID	Ctrl		Doromo	Checksu	
			rw	isQueued	Params	m	
0 v A A 0 v A A	2.16	11	11 0	0	uint8_t[16]:alarmsState	Payload	
0xAA 0xAA	2+16	11				checksum	

## **■NOTE**

Each byte in the array alarmsState identifies the alarm status of 8 alarm items, with the MSB in the high order while the LSB in the low order. Refer to Dobot ALARM document of detailed definition for each alarm bit.

#### 1.5.2 Clear All Alarms State

This command is to clear alarm status, the issued command packet format is shown in Table 29, and the returned command packet format is shown in Table 30.

Table 29 The command packet of ClearAllAlarmsState

Header			Payload					
	Len	ID		Ctrl	Params	Checksu m		
			rw	isQueued	Params			
0xAA 0xAA	2+0 2	21	1	0	Empty	Payload		
		21	1		Empty	checksum		

Table 30 The returned command packet of ClearAllAlarmsState

Header			Payload				
	Len	ID	Ctrl		Params	Checksu	
		וט	rw	isQueued	Params	m	
0xAA 0xAA	2+0	21	1 0	Empty	Payload		
		21	1	U	Empty	checksum	

## **1.6 Homing Function**

This part is homing function, including setting homing parameter, obtaining homing parameter, and setting homing position command. The default home position is  $(0^{\circ}, 45^{\circ}, 45^{\circ}, 0^{\circ})$ .

## 1.6.1 Set/Get HOMEParams

• This command is to set homing position, the issued command packet format is shown in Table 31, and the returned command packet format is shown in Table 32.

Table 31 The command packet of SetHOMEParams

	Len		Payload				
Header		ID	Ctrl		Doromo	Checksu	
		טו	rw	isQueued	Params	m	
0xAA 0xAA	2+16	30	30 1 0 or 1 HOMEParams (See Program 2)		Payload		
UXAA UXAA	2+10	30	1	0 01 1	HOMEFaranis (See Flograni 2)	checksum	

Table 32 The returned command packet of SetHOMEParams

	Len		Chaalaaa			
Header		ID	Ctrl		Danasas	Checksu
			rw	isQueued	Params	m
0xAA 0xAA	2+8 or 2+0	30	1	1 or 0	uint64_t:queuedCmdIndex or Empty	Payload checksum

• This command is to get homing position, the issued command packet format is shown in Table 33, and the returned command packet format is shown in Table 34.

Table 33 The command packet of GetHOMEParams

Header	Len		Payload				
		ID	Ctrl		Params	Checksu	
			rw	isQueued	Params	m	
0xAA 0xAA	2+0 3	30	0	0	Country	Payload	
UXAA UXAA		30	U	U	Empty	checksum	

Table 34 The returned command packet of GetHOMEParams

			Payload				
Header	Len	ID	Ctrl		Params	Checksu	
		טו	rw	isQueued	Falallis	m	
0xAA 0xAA	2+16	30	0	0	HOMEParams (See Program 2	Payload	
					)	checksum	

Program 2 HOMEParams definition

```
typedef struct tagHOMEParams {
    float x; Dobot coordinates X;
    float y; Dobot coordinates y;
    float z; Dobot coordinates z;
    float r; Dobot coordinates r;
} HOMEParams;
```

#### 1.6.2 SetHOMECmd

This command is to execute the homing function, the issued command packet format is shown in Table 35, and the returned command packet format is shown in Table 36.

Table 35 The command packet of SetHOMECmd

	Len		Checksu			
Header		ID	Ctrl		Doromo	
		ID	rw	isQueued	Params	m
0xAA 0xAA	2+4	31	1	1 or 0	HOMECmd (See Program 3)	Payload checksum

## 1.10 PTP

Playback commands are used for the relevant motion parameters setting and configuration, including joint parameters, coordinate system parameters, ratio parameters, and other related parameters.

#### 1.10.1 Set/Get PTP.JointParams

These commands are used to set and get the playback speed parameters, including the velocity and acceleration of joint coordinate axes. The speed set by this command is only applied to playback motion and does not work for the jogging movement.

 This command is to set the velocity and acceleration of the joint coordinate axes in PTP mode. The issued command packet format is shown in Table 85, and the returned command packet format is shown in Table 86.

Table 85 The command packet of SetPTPJointParams

	Len		Payload

Program 16 PTPCmd definition

```
typedef struct tagPTPCmd {
uint8_t ptpMode;
                          //PTP mode (Value range 0~8)
float x;
                       //x,y,z,r is the parameter of ptpMode, which can be set as the coordinates
                           //Joint angles ,coordinates orangle increments
float y;
float z;
float r;
} PTPCmd;
Among these, the value of ptpMode as follows:
enum {
   JUMP_XYZ,
                        // JUMP mode, (x,y,z,r) is the target point in Cartesian coordinate system
   MOVJ_XYZ,
                       // MOVJ mode, (x,y,z,r) is the target point in Cartesian coordinate system
   MOVL_XYZ,
                       //MOVL mode, (x,y,z,r) is the target point in Cartesian coordinate system
   JUMP_ANGLE,
                       // JUMP mode, (x,y,z,r) is the target point in Joint coordinate system
   MOVJ_ANGLE,
                        // MOVJ mode, (x,y,z,r) is the target point in Joint coordinate system
   MOVL_ANGLE,
                        // MOVL mode, (x,y,z,r) is the target point in Joint coordinate system
   MOVJ_INC,
                      // MOVJ mode, (x,y,z,r) is the angle increment in Joint coordinate system
   MOVL INC,
                      // MOVL mode, (x,y,z,r) is the Cartesian coordinate increment in Joint coordinate system
   MOVJ_XYZ_INC, // MOVJ mode, (x,y,z,r) is the Cartesian coordinate increment in Cartesian coordinate
                            system
   JUMP_MOVL_XYZ, // JUMP mode, (x,y,z,r) is the Cartesian coordinate increment in Cartesian coordinate
                             system
};
```

## 1.10.6 Set/Get PTPLParams

These commands are used to set and receive the playback speed parameters of rail, including the speed acceleration as well as the linear velocity and acceleration. The speed set by this command is only applied to playback motion and does not work for the teaching movement.

• This command is to set the velocity and acceleration of the sliding rail in PTP mode, the issued command packet format is shown in Table 103, and the returned command packet format is shown in Table 104.

}POCmd;
```

## 1.11 CP

The commands of continuous trajectory is used for motion setting and configuration related to continuous trajectory, which includes joint parameter, coordinate parameter, functional parameter and so on. The function is corresponded to Dobot CP, realizing the function of writing, drawing, laser engraving and other functions related to continuous trajectory.

#### 1.11.1 Set/Get CPParams

This two commands are to set and get parameters of continuous trajectory, including planned acceleration, joint velocity and acceleration. This command is only available for continuous trajectory motion.

 This command is to get the motion parameters in CP mode. The issued command packet format is shown in Table 117, and the returned command packet format is shown in Table 118.

Table 117 The command packet of SetCPParams

Header	Len		Payload				
		ID	Ctrl		Doromo	Checksu	
			rw	isQueued	Params	m

}

CPCmd;
}
CPCmd;
```

## 1.12 ARC

#### 1.12.1 Set/Get ARCParams

 This command is to set the velocity and acceleration in ARC mode, the issued command packet format is shown in Table 125, and the returned command packet format is shown in Table 126.

Table 125 The command packet of SetARCParams

Header			ad			
	Len	ID	Ctrl		Doromo	Checksum
			rw	isQueued	Params	
0 4 4 0 4 4	2.16	100	1	1 0 0	ARCParams (See Program	Payload
UXAA UXAA	0xAA 0xAA	100	1	1 or 0	25)	checksum

Issue V1.1.4 (2019-05-05)

Communication Protocol

Table 126 The returned command packet of SetARCParams

	Len		Payload				
Header		ID	Ctrl		Doromo	Checksu	
		טו	rw	isQueued	Params	m	
0xAA 0xAA	2+8 or 2+0	100	1	1 or 0	uint64_t:queuedCmdIndex or Empty	Payload checksum	

 This command is to set the velocity and acceleration in ARC mode, the issued command packet format is shown in Table 127, and the returned command packet format is shown in Table 128.

Table 127 The command packet of GetARCParams

				Payload			
Header Len		ID	Ctrl		Params	Checksum	
		טו	rw	isQueued	Falallis		
0xAA 0xAA	2+0	100	0	0	Empty	Payload checksum

Header		ID	Ctrl		Params	
		טו	rw	isQueued	Faiallis	m
0xAA 0xAA	2+8 or 2+0	101	1	1 or 0	uint64_t: queuedCmdIndex or Empty	Payload checksum

Program 26 ARCCmd definition

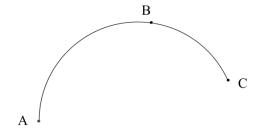

## **MNOTE**

- arc track is the space of the arc, from the current point, any point on the arc and the end point of the arc together to determine the three points;
- The arc always passes from one point on the arc to the end point.

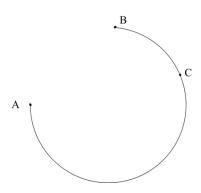

## Circular trajectory shown as follows:

• A is the current point, B is any point on the arc, C is the end point.

• A is the current point, C is any point on the arc, B is the end point.

## **1.13 WAIT**

#### 1.13.1 SetWAITCmd

This commd is to execute the waiting command, the issued command packet format is shown in Table 131, and the returned command packet format is shown in Table 132.

Program 27)

checksum

## 1.17.5 Set/Get WIFINetmask

• This command is to set netmask, the issued command packet format is shown in Table 181, and the returned command packet format is shown in Table 182.

Table 181 The command packet of SetWIFINetmask

			Payload					
Header Len	ID I	Ctrl		Doromo	Checksum			
		rw	isQueued	Params				
0xAA 0xAA	2+4	154	1	0	WIFINetmask (See	Payload checksum		

Issue V1.1.4 (2019-05-05)

Communication Protocol

Table 182 The returned command packet of SetWIFINetmask

	Header Len	Len	5	Ctrl		Doromo	Checksum
			ID rw	rw	isQueued	Params	
	0xAA 0xAA	2+0	154	1	0	Empty	Payload checksum

 This command is to get netmask, the issued command packet format is shown in Table 183, and the returned command packet format is shown in Table 184.

Table 183 The command packet of GetWIFINetmask

			Payload					
Header Len	ID	Ctrl		Doromo	Checksum			
		ן וט	rw	isQueued	Params			
0xAA 0xAA	2+0	154	0	0	Empty	Payload checksum		

Table 184 The returned command packet of GetWIFINetmask

			Payload					
Header Len	ID	Ctrl		Damana	Checksum			
		rw	isQueued	- Params				
0xAA 0xAA	2+4	154	0	0	WIFINetmask (See Program 39)	Payload checksum		

Program 39 WIFINetmask definition

typedef struct tagWIFINetmask {
uint8\_t addr[4];
} WIFINetmask;

## 1.17.6 Set/Get WIFIGateway

• This command is to set gateway, the issued command packet format is shown in Table 185, and the returned command packet format is shown in Table 186.

Table 185 The command packet of SetWIFIGateway

			Payload					
Header Len	2	Ctrl		Params	Checksum			
		ID	rw	isQueued	Falallis			
0xAA 0xAA	2+4	155	1	0	WIFIGateway (See Program	Payload		
OXAA OXAA	Z <b>+4</b>	133	1	U	40)	checksum		

Issue V1.1.4 (2019-05-05)

Communication Protocol

Table 186 The returned command packet of SetWIFIGateway

			Payload					
Header Len	Len	ID	Ctrl		Doromo	Checksum		
		ID	rw	isQueued	Params			
0xAA 0xAA	2+0	155	1	0	Empty	Payload		
UXAA UXAA	2+0	133	1	U	Empty	checksum		

This command is to get gateway, the issued command packet format is shown in Table 187, and the returned command packet format is shown in Table 188.

Table 187 The command packet of GetWIFIGateway

Header Len						
	Len	ID	Ctrl		Doromo	Checksum
		ID	rw	isQueued	Params	
0xAA 0xAA	2+0	155	0	0	Empty	Payload checksum

Table 188 The returned command packet of GetWIFIGateway

Header Len						
	Len	ID	Ctrl		Damana	Checksum
		ID	rw	isQueued	Params	
0xAA 0xAA	2+4	155	0	0	WIFIGateway (See Program	Payload
UXAAUXAA	2+4	133	0	U	40)	checksum

Program 40 WIFIGateway definition

typedef struct tagWIFIGateway { uint8\_t addr[4]; } WIFIGateway;

#### 1.17.7 **Set/Get WIFIDNS**

This command is to set DNS, the issued command packet format is shown in Table 189, and the returned command packet format is shown in Table 190.

Table 189 The command packet of SetWIFIDNS

Header Len						
	Len	ID	Ctrl		<b>П</b> ачана	Checksum
		טו	rw	isQueued	Params	
Ov. A. A. Ov. A. A.	2+4	156	1	0	WIFIDNS (See Program	Payload
0xAA 0xAA	2+4	130	1	0	41)	checksum

Issue V1.1.4 (2019-05-05)

Communication Protocol Copyright © Yuejiang TechnologyCo., Ltd

Table 190 The returned command packet of SetWIFIDNS

Header Len						
	Len	ID	Ctrl		Doromo	Checksum
		rw	rw	isQueued	Params	
0xAA 0xAA	2+0	156	1	0	Empty	Payload checksum

This command is to get DNS, the issued command packet format is shown in Table 191, and the returned command packet format is shown in Table 192.

Table 191 The command packet of GetWIFIDNS

Header Ler			Chaakau			
	Len	ID	Ctrl		Doromo	Checksu
		ID _	rw	isQueued	Params	m
0xAA 0xAA	2+0	156	0	0	Empty	Payload checksum

Table 192 The returned command packet of GetWIFIDNS

Header Le			Payload				
	Len	5	Ctrl		Damana	Checksu	
		ID	rw	isQueued	Params	m	
0.440.44	2+4	2+4 156	0	0	WIFIDNS (See Program	Payload

# **1.18 Losing-Step Detection**

# 1.18.1 SetLostStepParams

This command is to set losing-step threshold, the issued command packet format is shown in Table 195, and the returned command packet format is shown in Table 196.

Table 195 The command packet of SetLostStepParams

Header L				Checksu		
	Len	ID	Ctrl		Doromo	
			rw	isQueued	Params	m
0xAA 0xAA	2+4	170	1	0	float: value	Payload
UXAA UXAA	2+4	170	1	0	noat: value	checksum

Table 196 The returned command packet of SetLostStepParams

Header Le			Checksu			
	Len	ID rw	Ctrl		Davassa	
			rw	isQueued	Params	m
0xAA 0xAA	2+0	170	1	0	Empty	Payload checksum

## 1.18.2 SetLostStepCmd

This command is to execute losing-step, the issued command packet format is shown in Table 197, and the returned command packet format is shown in Table 198.

Table 197 The command packet of of SetLostStepCmd

Header Lei			Checksu			
	Len	ID	Ctrl		Params	
		יוו	rw	isQueued	Params	m
0xAA 0xAA	2+0	171	1	1 or 0	Empty	Payload checksum

Table 198 The returned command packet of SetLostStepCmd

Header	Len		Checksu			
		ID	Ctrl		Da жажа	
		וט	rw	isQueued	Params	m
0xAA 0xAA	2+8 or 2+0	171	1	1 or 0	uint64_t:queuedCmdIndex or Empty	Payload checksum

## 1.19 Queued execution control commands

Queued execution control commands are used to set related parameters of the queue command execution, including the command execution mode (online / offline), the current state of the queue command buffer, the execution status of the queue command (TRUE / FALSE), the queue command execution control (START / PAUSE / STOP).

#### 1.19.1 Set QueuedCmdStartExec

This command is to start in command queue, the issued command packet format is shown in Table 199, and the returned command packet format is shown in Table 200.

Table 199 The command packet of SetQueuedCmdStartExec

Header Len			ad	Checksu		
	Len	ID	Ctrl		Doromo	
			rw	isQueued	Params	m
0xAA 0xAA	2+0	240	1	0	Empty	Payload checksum

Table 200 The returned command packet of SetQueuedCmdStartExec

					Checksum		
Header Len		ID	Ctrl				Doromo
		טו	rw	isQueued	Params		
0xAA 0xAA	2+0	240	1	0	Empty	Payload checksum	

## 1.19.2 Set QueuedCmdStopExec

This command is to stop in command queue, the issued command packet format is shown in Table 201, and the returned command packet format is shown in Table 202.

Table 201 The command packet of SetQueuedCmdStopExec

			Payload					
Header Len	Len	ID	Ctrl		Params	Checksu		
		rw	rw	isQueued	Faiallis	m		
0xAA 0xAA	2+0	241	1	0	Empty	Payload checksum		

Issue V1.1.4 (2019-05-05)

Communication Protocol

Table 202 The returned command packet of SetQueuedCmdStopExec

			Payload					
Header Len	ID.		Ctrl	Doromo	Checksu			
		ID	rw	isQueued	Params	m		
0xAA 0xAA	2+0	241	1	0	Г	Payload		
UXAA UXAA	2+0	241	1	U	Empty	checksum		

#### 1.19.3 $Set\ QueuedCmdForceStopExec$

This command is to stop in command queue forcedly, the issued command packet format is shown in Table 203, and the returned command packet format is shown in Table 204.

Table 203 The command packet of SetQueuedCmdForceStopExec,

				Paylo	ad	Checksu
Header Ler	Len	15	Ctrl		Doromo	
		ID	rw	isQueued	Params	m
0.440.44	2+0 242	1	0	Et	Payload	
0xAA 0xAA	2+0	242	1	U	Empty	checksum

Table 204 The returned command packet of SetQueuedCmdForceStopExec,

Header Len			ad	Checksu		
	j		Ctrl	Davassa		
		ID –	rw	isQueued	Params	m
0xAA 0xAA	0 4 4 0 4 4 2 + 0	2+0 242	1	0	Empty	Payload
UXAA UXAA	2+0	242	1	0		checksum

#### 1.19.4 Set QueuedCmdStartDownload

This command is to download something, the issued command packet format is shown in Table 205, and the returned command packet format is shown in Table 206.

Table 205 The command packet of SetQueuedCmdStartDownload

			Checksu					
Header Len	ID Ctrl		Params					
		rw		isQueued	raiailis		m	
0xAA 0xA	Δ	2+8	243	1	0	uint32_t:	uint32:	Payload
OXIIIOXII	11	210	243	1	U	totalLoop	linePerLoop	checksum

Table 206 The returned command packet of SetQueuedCmdStartDownload

				Payload		
Header	Len	ID		Ctrl	Doromo	Checksum
		ID	rw	isQueued	Params	
0xAA 0xAA	2+0	243	1	0	Empty	Payload checksum

Issue V1.1.4 (2019-05-05)

Communication Protocol Copyright © Yuejiang TechnologyCo., Ltd

## **NOTE**

Dobot controller supports storing commands in the external Flash of the controller, which can then be executed by pressing the keys on the controller, that is, offline function.

## 1.19.5 Set QueuedCmdStopDownload

This command is to stop to download something, the issued command packet format is shown in Table 207, and the returned command packet format is shown in Table 208.

Table 207 The command packet of SetQueuedCmdStopDownload

			Payload				
Header Len	ID	Ctrl		Params	Checksu		
		וט _	rw	isQueued	Falallis	m	
0xAA 0xAA	2+0	244	1	0	O Eventu	Payload	
UXAA UXAA	2+0	244	1	U	Empty	checksum	

Table 208 The returned command packet of SetQueuedCmdStopDownload

			ad	Chaalau		
Header Len	ID	Ctrl		Doromo	Checksu	
		rw	rw	isQueued	Params	m
0xAA 0xAA	2+0	244	1	0	Empty	Payload
UXAA UXAA	2+0	244	1	U		checksum

## 1.19.6 Set QueuedCmdClear

This command is to clear command queue, the issued command packet format is shown in Table 209, and the returned command packet format is shown in Table 210.

Table 209 The command packet of SetQueuedCmdClear

Header Len			Checksu			
	5	Ctrl		Doromo		
		ID rw	rw	isQueued	Params	m
0xAA 0xAA	2+0	245	1	0	Empty	Payload
					1 3	checksum

Table 210 The returned command packet of SetQueuedCmdClear

			Payload					
Header Len	ID		Ctrl	Params	Checksu			
		וט	rw	isQueued	Faiallis	m		
0xAA 0xAA	2+0	245	1	0	Empty	Payload checksum		

Issue V1.1.4 (2019-05-05)

Communication Protocol

## 1.19.7 Get QueuedCmdCurrentIndex

This command is to get command index, the issued command packet format is shown in Table 211, and the returned command packet format is shown in Table 212.

Table 211 The command packet of GetQueuedCmdCurrentIndex

Header	Len		Checksu			
		ID	Ctrl		Doromo	
			rw	isQueued	Params	m
0xAA 0xAA	2+0	246	0	0	Empty	Payload
						checksum

Table 212 The returned command packet of GetQueuedCmdCurrentIndex

Header	Len		Checksu			
		ID	Ctrl		Doromo	
			rw	isQueued	Params	m
0xAA 0xAA	2+8	246	0	0	uint64_t:	Payload
					queuedCmdCurrentIndex	checksum

## **MNOTE**

There is a 64-bit internal count index in Dobot controller command queue mechanism. The counter is automatically incremented after the controller executes a command. By this internal index, you can check how many queue commands the controller have been executed, and which command is executing currently.
